

Get eEvid Certificate By "X-eEvid-Source-Id"

Author: Xavier Gómez

Email: <bezerik@gmail.com>

Link: <http://bezerik.es>

Xavier has come up with the following PHP script for downloading eEvid receipt files. This script will first request the data for a specific eEvid, and then use this data to retrieve the stored file.

Provided you keep the source information, this script is free to use.

Thank you Xavi!

The Code

```
<?php
/**
 * Get eEvid Certificate By "X-eEvid-Source-Id"
 *
 * @Autor Xavier Gómez <bezerik@gmail.com>
 * @link http://bezerik.es
 */
function getEvidCertificate($evid_id) {
    if(!$evid_id) {
        // show your own error
        return false;
    }

    // config
    $private_key = 'XXXXXXXX';
    $geteevid_id = 'YYYYY';

    // in the way of download the pdf certificate we need to find first the eevid-tx-id
    // to do that, we search on eevid.com website by the defined id "xfield" added on email header
    // as "x-eevid-id".
    $search_url = "https://secure.eevid.com/srv/search/{"$private_key}/xfield/{"$evid_id}";
    $json = file_get_contents($search_url);
    $data = json_decode($json);
    $eEvid_object = $data[0];

    if(!$eEvid_object->tx_id) {
        // show your own error
        return false;
    }

    // download file
    $download_url =
    "https://secure.eevid.com/srv2/geteevid/{"$private_key}/{"$geteevid_id}/{"$eEvid_object->tx_id}";
    header("Location: {"$download_url}");
}
?>
```

Disclaimer

We are grateful to anyone sharing code and experiences with the eEvid community of users. Although we cannot take any responsibilities about what others share, we review the contents of all submissions prior making them available to the community. Anyone looking for help when using this type of resources should be encouraged to contact the author.
